

Website Design and Seminar Registration System for Clients/Prospects

Shane Brenizer, UI Designer

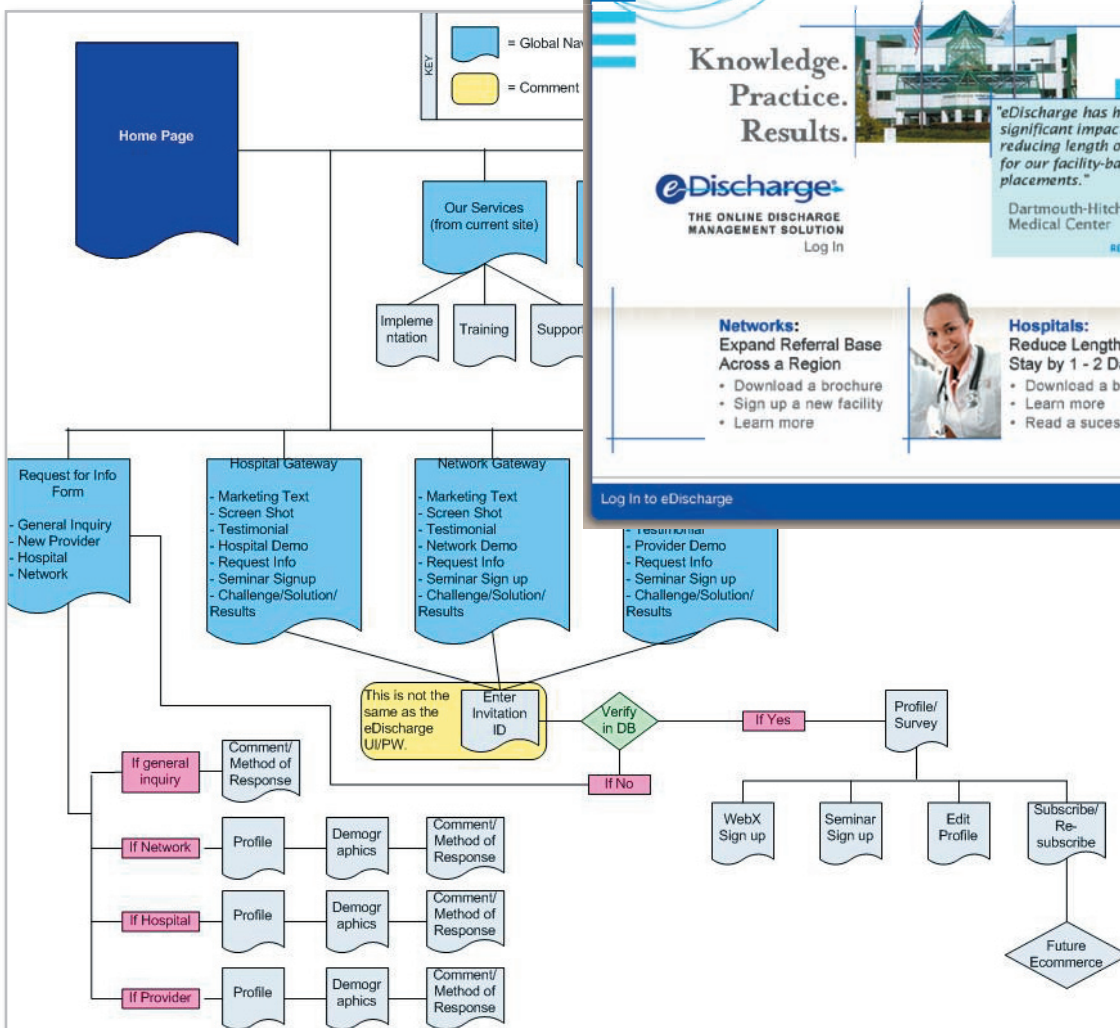

Curaspan, Inc.

BACKGROUND: Shane Brenizer was hired by Curaspan to analyze the best process for hospitals to manage their cases.

PROBLEM: The current software needed to, after receiving a FAX number, send an invitation ID to both paid and unpaid hospitals, networks and providers. The recipient uses the ID to log-in and register for seminars.

SOLUTION: Shane Brenizer analyzed previous methods of delivering ID's and created flowcharts for a more efficient way for software to achieve the same goals. During this process, Shane Brenizer designed and coded a new website. An Oracle database of clients was tied into the website by Curaspan developers.

The new homepage designed by Shane Brenizer.

A flowchart diagramming the path for the software.
